DESCRIPTION

| Table: Sales |
|---|
| ++ |
| Column Name Type |
| ++ |
| sale_id int |
| product_id int |
| year |
| quantity int |
| price int |
| ++ |
| (sale_id, year) is the primary key (combination of columns with unique values) of this table. |
| product_id is a foreign key (reference column) to Product table. |
| Each row of this table shows a sale on the product product_id in a certain year. |
| Note that the price is per unit. |
| |
| Table: Product |
| ++ |
| Column Name Type |
| ++ |
| product_id int |
| product_name varchar |
| ++ |
| product_id is the primary key (column with unique values) of this table. |
| Each row of this table indicates the product name of each product. |

 $Write \ a \ solution \ to \ report \ the \ product_name, \ year, \ and \ price \ for \ each \ sale_id \ in \ the \ Sales \ table.$

Return the resulting table in **any order**.

The result format is in the following example.

Example 1: Input: Sales table: +----+ | sale_id | product_id | year | quantity | price | +----+ | 1 | 100 | 2008 | 10 | 5000 | | 2 | 100 | 2009 | 12 | 5000 | | 7 | 200 | 2011 | 15 | 9000 | +----+ Product table: +----+ | product_id | product_name | +----+ | 100 | Nokia | | 200 | Apple | | 300 | Samsung | +----+ **Output:** +----+ | product_name | year | price | +----+ | Nokia | 2008 | 5000 | | Nokia | 2009 | 5000 | | Apple | 2011 | 9000 |

Explanation:

+----+

From sale_id = 1, we can conclude that Nokia was sold for 5000 in the year 2008.

From sale_id = 2, we can conclude that Nokia was sold for 5000 in the year 2009.

From sale_id = 7, we can conclude that Apple was sold for 9000 in the year 2011.

SOLUTION

MySQL:

```
SELECT p.product_name, s.year, s.price
FROM Sales s
JOIN Product p
ON s.product_id = p.product_id;
```

PostgreSQL:

```
SELECT p.product_name, s.year, s.price
FROM sales s
JOIN Product p
ON p.product_id = s.product_id;
```
